

During 2019, a major expansion should make the Urology Unit based at the EDGH
The Gold Standard of the South

Our charity has undertaken to donate a Lithotripter Unit to perform ESWL procedures

What is ESWL?

Extracorporeal Shock Wave Lithotripsy
[breaking stones]

Lithotripters use shock waves to break down kidney stones & other stones into small crystals that pass out of your body naturally

No incision made, so no anaesthetic

You are awake during the 45-60 minute procedure and return home the same day

That is why we've named our Project

No Surgery – Just Shocked

How much?

A high quality Lithotripter is expensive

Thanks to match-funding Pledgers, we can benefit from The Big Give Christmas Challenge Week
If we raise **£2,500** by online donations, our Project will receive **£5,000**

How to donate?

From midday 27 Nov to midday 4 Dec 2018, all online donations are **doubled**

- Make a note in your diary for midday 27 November 2018
- Copy/enter this link http://bit.ly/no_surgery-just_shocked
- Click on the '*Double my Donation*' button and follow the process
- Minimum donation is **£5**, doubled its worth **£10** - same principle for any higher amount

WE greatly appreciate YOUR support for our Community Project

Who benefits?

Anyone unfortunate to suffer from 'Stones' - **enormous** long-term gains

- Patients No invasive stone surgery and no stay in hospital
- Relatives Save two days of travelling costs, time and worry
- Surgeons More procedures carried out so reducing waiting lists
- Hospital Significant savings in staffing and accommodation costs

One donation – twice the impact
